Summary

Data Science graduate student with strong foundation in machine learning, statistical analysis, and data visualization. Experienced in developing end-to-end data solutions from ETL to model deployment. Proficient in Python, SQL, and modern data stack tools with hands-on project experience in predictive modeling, analytics platforms, and business intelligence dashboards.

Technical Skills

- **Programming:** Python (Pandas, NumPy, Scikit-learn), SQL, R
- **Machine Learning:** Regression, Classification, Neural Networks, Ensemble Methods, Hyperparameter Tuning
- **Data Visualization:** Tableau, Streamlit, Matplotlib, Seaborn
- **Databases & Tools:** PostgreSQL, SQLite, Git, Docker
- **Cloud & AI:** Microsoft Azure AI, Azure ML Studio
- **Frameworks:** Django, React, Next.js

Projects

Advanced Analytics Platform | Python, Streamlit, Scikit-learn, TensorFlow

- Developed comprehensive web application for automated data analysis supporting multiple file formats (XLS, JSON, CSV)
- Implemented automated EDA, statistical reporting, and advanced modeling (Regression, Classification, Neural Networks)
- Deployed application on Streamlit Cloud serving interactive analytics to end-users
- *Technologies: Python, Streamlit, Pandas, Scikit-learn, Various ML Models*

Healthcare Cost Analysis & Predictive Modeling | Python, SQL, Tableau, Machine Learning

- Analysed healthcare dataset to identify key cost drivers and predict medical expenses using linear regression
- Built ETL pipeline and performed exploratory data analysis with SQL queries
- Created interactive Tableau dashboard to visualize insights for stakeholder decision-making
- *Technologies: Python, Pandas, Scikit-learn, SQLite, Tableau*

Smart Pricing: Predictive Modeling for Ride Fare Optimization | *Python, Machine Learning, Ensemble Methods*

- Developed and compared multiple ML models (Random Forest, XGBoost, LightGBM, Neural Networks) to predict optimal ride fares
- Implemented ensemble method combining best-performing models for robust predictions
- Addressed business challenges of dynamic pricing with limited data (990 records)
- *Technologies: Python, Scikit-learn, XGBoost, LightGBM, TensorFlow*

Mahabharata RAG-AI Question Answering System | *Python, NLP, Vector Databases*

- Built Retrieval-Augmented Generation system for semantic search and Q&A on complex text corpus
- Implemented document processing, embedding generation, and similarity search
- *Technologies: Python, LangChain, LLMs, Vector Databases*

Professional Experience

Software Engineer II | [Gnyan.AI](#)

Mar 2024 – Sept 2024

- Developed full-stack data applications with React frontend and Django/Node.js backend
- Implemented data processing features and interactive visualizations
- Used Docker for containerized deployment of data applications

Software Engineer | [Gnyan.AI](#)

Oct 2023 – Mar 2024

- Contributed to scalable backend systems supporting data-intensive applications

AI Solutions Intern | Crytonix Consulting Services

Oct 2023 – Nov 2023

- Implemented cloud-based AI solutions using Microsoft Azure AI services

Education

[M.Sc. in Data Science and Business](#) | University of Europe for Applied Sciences (Berlin, Germany)

Oct 2024 – Sep 2026 (Expected)

B.E. in Electrical, Electronics and Comm. Engineering | Sri Venkateshwara College of Engineering
(India)
Aug 2019 – Jun 2023
